

Eezi Quartz

Looking after your Eezi Quartz countertops...

Eezi Quartz is easy-going and doesn't need a lot of attention to keep its good looks. To clean Eezi Quartz use warm water and a mild detergent, or a spray-and-wipe-type cleaner for the best results.

Low Maintenance: Unlike marble and granite, Eezi Quartz doesn't need sealing. If you need more than a mild detergent to get rid of stubborn marks use a nonabrasive cream cleanser, such as our **Eezi Quartz Cream Cleanser** or **liquid Chemico**, and a **non-scratch pad**. Always rinse with clean water to remove any residue.

Heat Resistant: Eezi Quartz is quite heat resistant, beating most man-made surfaces and even marble and limestone. Anything **below 100°C** should not damage the material, however Eezi Quartz can burn or warp if exposed to sudden high temperature changes. We recommend that hot pots and pans never be placed directly on the surface. Rather **use a hot pad or trivet** on the surface and under cooking units such as electric frying pans, crock pots, or roaster ovens.

Chopping: Never chop directly onto the surface to avoid scratches, always use a chopping board.

Cleaning Agents to Avoid: Eezi Quartz can be permanently damaged if it's exposed to strong chemicals and solvents. Never clean your Eezi Quartz countertops with products that contain **ammonia, trichloroethane or methylene chloride**, often found in paint removers. Avoid using aggressive cleaning products like **oven cleaners**. Products that contain oils or powders may leave a residue and should be rinsed off thoroughly. If your countertops accidentally get exposed to any of these damaging products, rinse immediately with clean water to neutralize the effect.
